Healthy Aging Study

**We are recruiting
healthy volunteers!**

Compensation up to \$125

Researchers in the Department of Psychological and Brain Sciences at the University of California, Santa Barbara are interested in learning more about **memory and brain function in midlife**. The purpose of the study is to understand how hormone levels influence memory in men and in women around the time of **menopause**.

Eligibility:

- Men and women between the ages of **45-60** years old
- Free of major health problems
- No metal on or inside your body

Study Includes:

- Medical history questionnaire
- 1 fMRI brain scan
- Learning and memory tasks
- 1 blood draw (a few teaspoons total)
